CIRCUIT INSPECTION

DTC	P0100	Mass Air Flow Circuit Malfunction
-----	-------	-----------------------------------

CIRCUIT DESCRIPTION

The mass air flow meter uses a platinum hot wire. The hot wire air flow meter consists of a platinum hot wire, thermistor and a control circuit installed in a plastic housing. The hot wire air flow meter works on the principle that the hot wire and thermistor located in the intake air bypass of the housing detect any changes in the intake air temp.

The hot wire is maintained at the set temp. by controlling the current flow through the hot wire. This current flow is then measured as the output voltage of the air flow meter.

The circuit is constructed so that the platinum hot wire and thermistor provide a bridge circuit, with the power transistor controlled so that the potential of A and B remains equal to maintain the set temp.

DTC No.	DTC Detecting Condition	Trouble Area
P0100	Open or short in mass air flow meter circuit with more than 3 sec. engine speed 4,000 rpm or less	 Open or short in mass air flow meter circuit Mass air flow meter ECM

If the ECM detects DTC "P0100" it operates the fail-safe function, keeping the ignition timing and injection volume constant and making it possible to drive the vehicle. HINT:

After confirming DTC P0100 use the OBD II scan tool or TOYOTA hand-held tester to confirm the mass air flow ratio from "CURRENT DATA".

Mass Air Flow Value (gm/sec.)	Malfunction

INSPECTION PROCEDURE

HINT:

Read freeze frame data using TOYOTA hand-held tester or OBD II scan tool. Because freeze frame records the engine conditions when the malfunction is detected, when troubleshooting it is useful for determining whether the vehicle was running or stopped, the engine warmed up or not, the air-fuel ratio lean or rich, etc. at the time of the malfunction.

Connect OBD II scan tool or TOYOTA hand-held tester, and read value of mass air flow rate.

PREPARATION:

- (a) Connect the OBD II scan tool or TOYOTA hand-held tester to the DLC3.
- (b) Turn ignition switch ON and push the OBD II scan tool or TOYOTA hand-held tester main switch ON.
- (c) Start the engine.

CHECK:

1

Read mass air flow rate on the OBD II scan tool or TOYOTA hand-held tester.
